

CORPORATE OVERVIEW

T3C Technologies is a Baltimore-based small business delivering cutting-edge, innovative technology solutions on time, on budget, and in a transparent manner. We believe the customer's business objectives should drive technology implementation — not the other way around — and we tailor every engagement to the customer's specific need, with long-term sustainability and stability in mind.

CORE COMPETENCIES

- **Cloud Management** — Cloud Smart migration and modernization strategy that balances new cloud investment with existing on-premises workloads to reduce total cost of ownership.
- **Data Management** — Data modernization and analytics that elevate customer experience and drive better-informed business outcomes.
- **Cyber Security** — Zero Trust architecture and a shift-left approach that moves beyond compliance toward genuine cyber resiliency, including continuous ATO.
- **Agile Management** — Transition from traditional delivery to Agile / DevSecOps for iterative, rapid releases that drive business-IT alignment.
- **Artificial Intelligence** — Agentic AI secured and governed from day one, with ML Ops as the operational discipline that keeps models reliable in production.

DIFFERENTIATORS

- 01 Cloud Smart**
Bespoke solutions built for the customer's actual environment — never a one-size-fits-all migration.
- 02 Comfortable being uncomfortable**
We fail early, learn quickly, and avoid costly overruns rather than pretend every plan survives contact with reality.
- 03 Cutting edge, by certification**
Our team holds industry-accredited certifications and stays current with the platforms our clients depend on.
